the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million.

There are a number of reasons for this increase. The most important is that the life expectancy of people in the UK has increased. In 1990, the average life expectancy of a man in the UK was 74 years and the average life expectancy of a woman was 78 years. In 2000, the average life expectancy of a man in the UK was 77 years and the average life expectancy of a woman was 81 years.

Another reason for the increase in the number of people aged 65 and over is that the number of people who are aged 65 and over has increased in all countries in the world. This is because the life expectancy of people in all countries has increased.

The increase in the number of people aged 65 and over has led to a number of changes in the way that people aged 65 and over live. For example, more people aged 65 and over are now living in retirement homes and more people aged 65 and over are now receiving state pensions.

The increase in the number of people aged 65 and over has also led to a number of changes in the way that people aged 65 and over are cared for. For example, more people aged 65 and over are now being cared for in care homes and more people aged 65 and over are now being cared for in their own homes.

The increase in the number of people aged 65 and over has also led to a number of changes in the way that people aged 65 and over are supported. For example, more people aged 65 and over are now being supported by family members and more people aged 65 and over are now being supported by community groups.

The increase in the number of people aged 65 and over has also led to a number of changes in the way that people aged 65 and over are educated. For example, more people aged 65 and over are now attending university and more people aged 65 and over are now attending further education colleges.

The increase in the number of people aged 65 and over has also led to a number of changes in the way that people aged 65 and over are employed. For example, more people aged 65 and over are now working in part-time jobs and more people aged 65 and over are now working in flexible jobs.

The increase in the number of people aged 65 and over has also led to a number of changes in the way that people aged 65 and over are housed. For example, more people aged 65 and over are now living in retirement villages and more people aged 65 and over are now living in care homes.

The increase in the number of people aged 65 and over has also led to a number of changes in the way that people aged 65 and over are supported. For example, more people aged 65 and over are now being supported by family members and more people aged 65 and over are now being supported by community groups.
